The markers differ from one model to another.

Every new turn sends the whole conversation again.

Fine-tuning teaches a manner of answering

You ask

What is our refund policy?

The chat model answers

Thank you for asking! Our policy is simple: you can return any item within a month for a full refund.

An invented answer

Fine-tuning teaches a manner of answering

You ask

What is our refund policy?

The chat model answers

Thank you for asking! Our policy is simple: you can return any item within a month for a full refund.

An invented answer

The manner. *Polite, short, in the format you expect.*

Fine-tuning teaches a manner of answering

You ask

What is our refund policy?

The chat model answers

Thank you for asking! Our policy is simple: you can return any item within a month for a full refund.

An invented answer

The manner. *Polite, short, in the format you expect.*

The facts. *The model never saw our policy. It writes the words that sound right.*

Fine-tuning teaches a manner of answering

You ask

What is our refund policy?

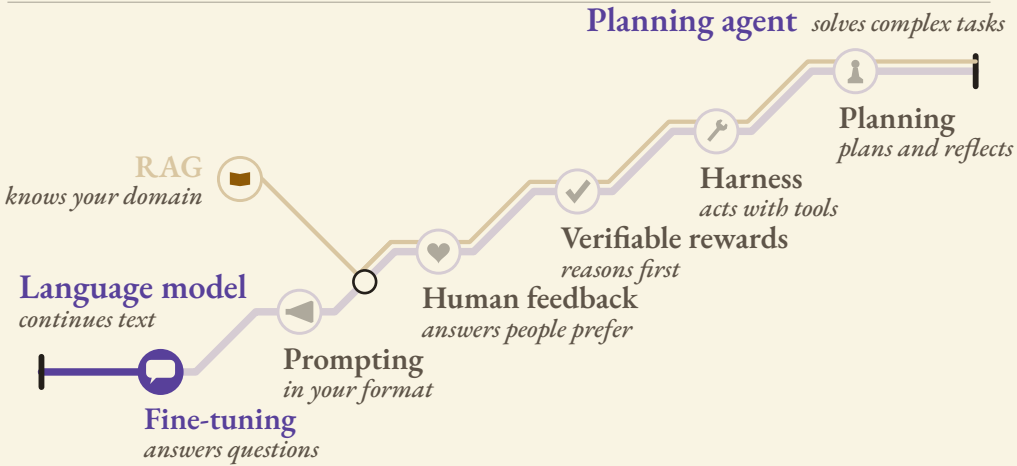

The chat model answers

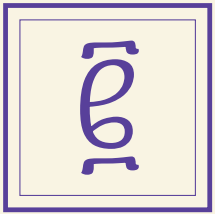

Thank you for asking! Our policy is simple: you can return any item within a month for a full refund.

An invented answer

- ***The manner.*** *Polite, short, in the format you expect.*
- ***The facts.*** *The model never saw our policy. It writes the words that sound right.*
- *Facts come from pretraining, or from documents you give it.*

One rung up: a chat model

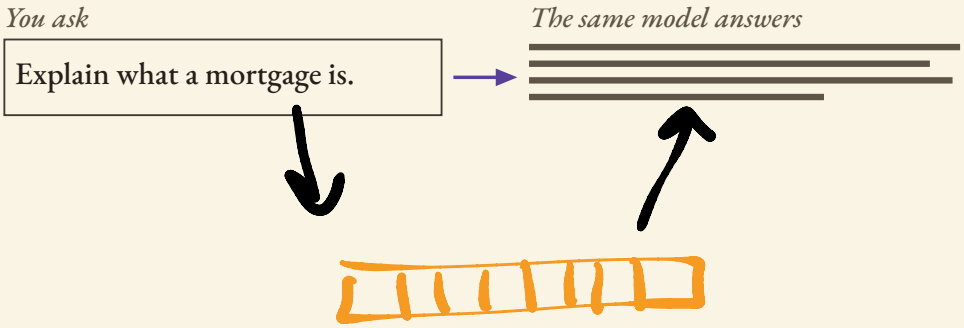

Section 2

Prompt engineering

Different words in, a different answer out

Different words in, a different answer out

You ask

The same model answers

Explain what a mortgage is. →

Explain what a mortgage is to a teenager, in two sentences. →

A mortgage is a loan for a home. You pay it back monthly.

Invented answers

Different words in, a different answer out

You ask

Explain what a mortgage is.

Explain what a mortgage is to a teenager, in two sentences.

Explain what a mortgage is, as a table with two columns.

The same model answers

A mortgage is a loan for a home. You pay it back monthly.

Term	Meaning
Loan	Money you borrow
Interest	The price of the loan

Invented answers

Different words in, a different answer out

You ask

Explain what a mortgage is.

Explain what a mortgage is to a teenager, in two sentences.

Explain what a mortgage is, as a table with two columns.

The same model answers

A mortgage is a loan for a home. You pay it back monthly.

Term	Meaning
Loan	Money you borrow
Interest	The price of the loan

Invented answers

The model is the same in all three rows. Only the words that go in are different.

A prompt is a brief to a new colleague

Task Explain what a mortgage is.

A capable new colleague has read everything and knows nothing about your company.

A prompt is a brief to a new colleague

Role	You are a bank advisor.
Task	Explain what a mortgage is.

A capable new colleague has read everything and knows nothing about your company.

A prompt is a brief to a new colleague

Role	You are a bank advisor.
Task	Explain what a mortgage is.
Example	Like this: a loan is money you borrow and pay back.

A capable new colleague has read everything and knows nothing about your company.

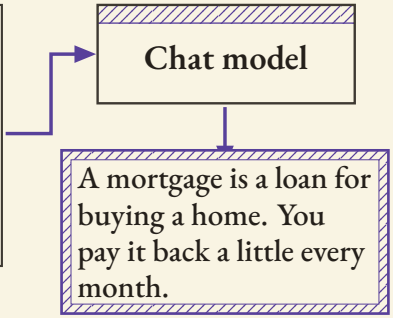

A prompt is a brief to a new colleague

Role	You are a bank advisor.
Task	Explain what a mortgage is.
Example	Like this: a loan is money you borrow and pay back.
Format	Two sentences, in plain words.

A capable new colleague has read everything and knows nothing about your company.

A prompt is a brief to a new colleague

Role	You are a bank advisor.
Task	Explain what a mortgage is.
Example	Like this: a loan is money you borrow and pay back.
Format	Two sentences, in plain words.

A capable new colleague has read everything and knows nothing about your company.

An invented answer

Examples in the prompt teach by showing

Message The parcel arrived broken. *Label* Complaint

Message Thank you, great service! *Label* Praise

Message Where is my order? *Label*

Examples in the prompt teach by showing

The prompt

Message The parcel arrived broken. *Label* Complaint

Message Thank you, great service! *Label* Praise

Message Where is my order? *Label*

Question

The model draws

Examples in the prompt teach by showing

The prompt

Message The parcel arrived broken. *Label* Complaint

Message Thank you, great service! *Label* Praise

Message Where is my order? *Label*

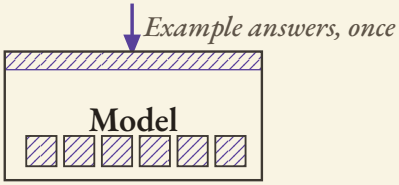

Question
The model draws

Nothing inside the model has changed. The examples have to be in the prompt every time.

A prompt steers the model without changing it

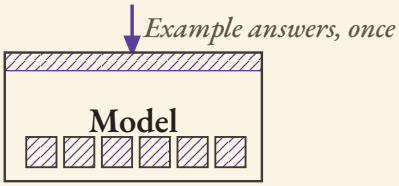

Fine-tuning

The numbers inside change, and so do all later answers.

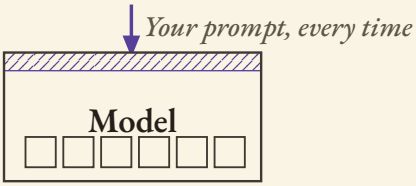

A prompt steers the model without changing it

Fine-tuning

The numbers inside change, and so do all later answers.

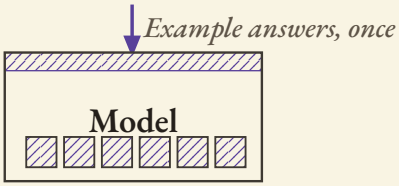

Prompting

The numbers inside stay the same. Only the input differs.

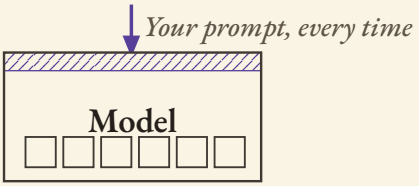

A prompt steers the model without changing it

Fine-tuning

The numbers inside change, and so do all later answers.

Prompting

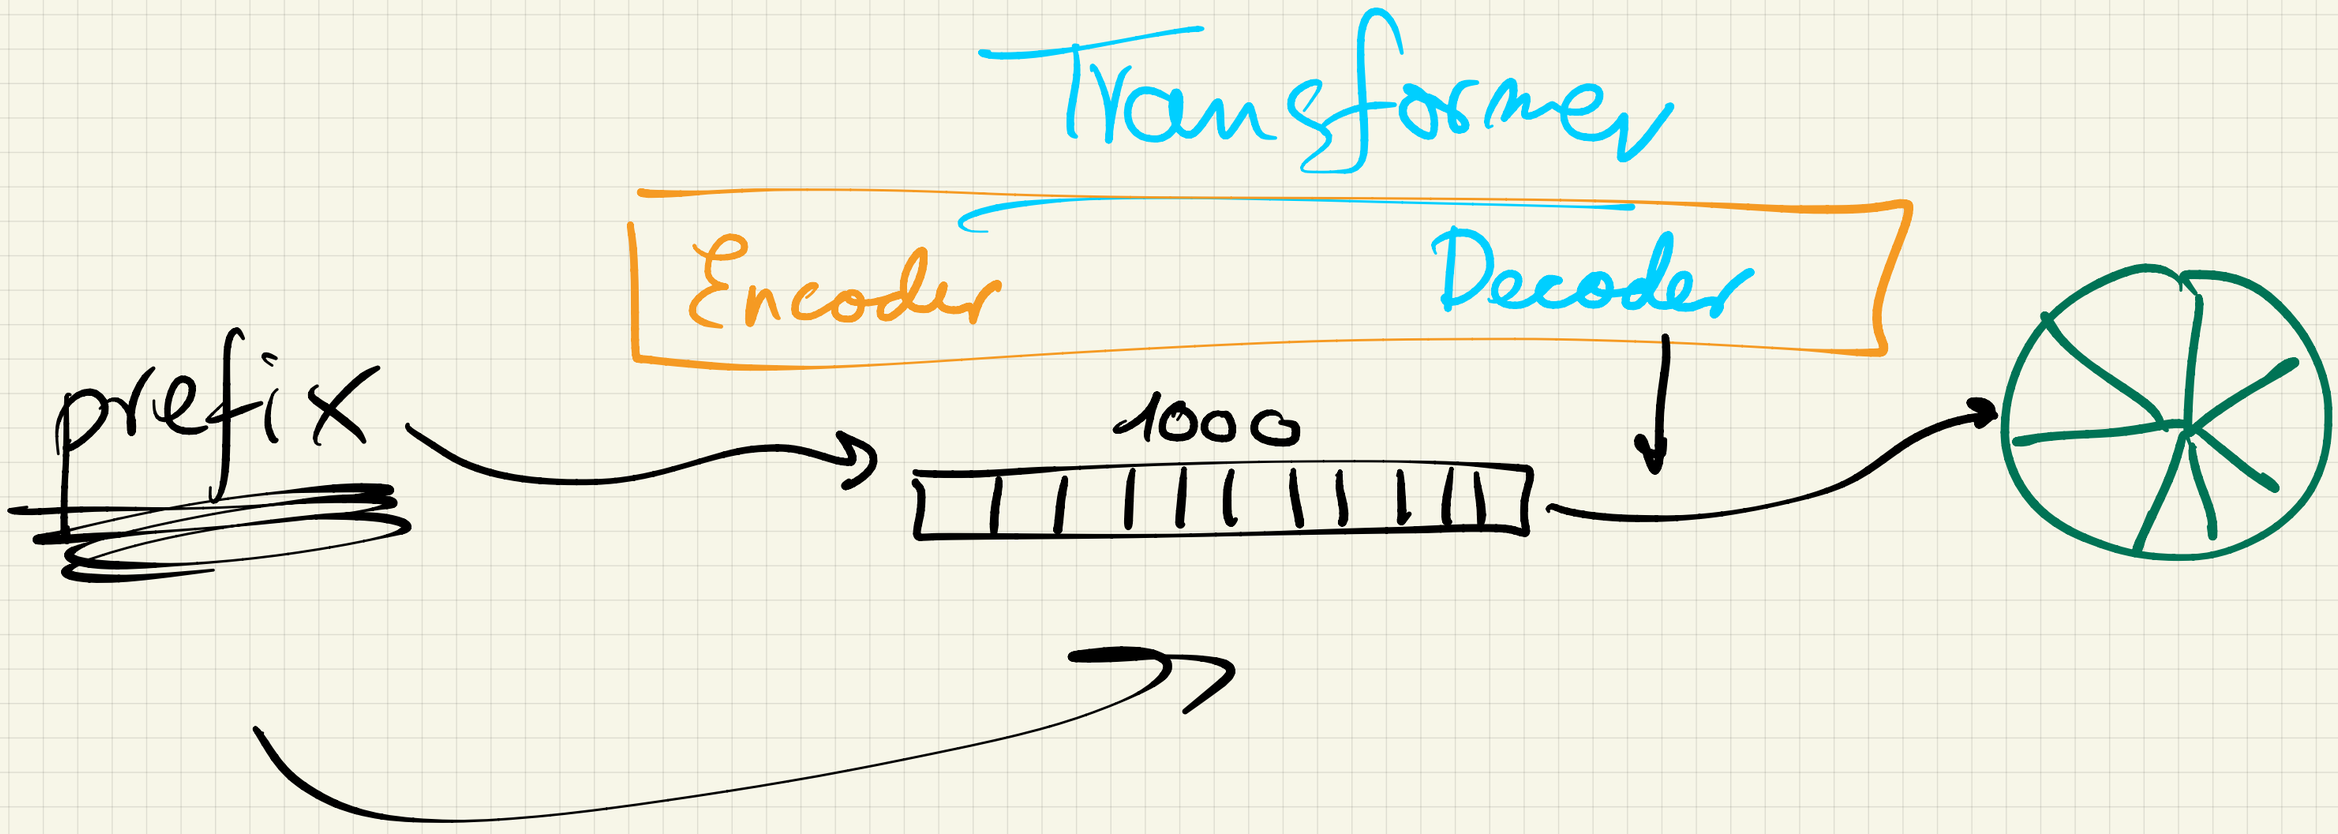

The numbers inside stay the same. Only the input differs.

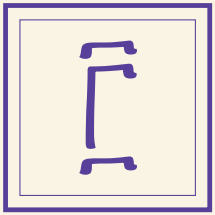

Prompting is quick to try and training is slow. Start with the prompt, and train when it is not enough.

Two rungs up: your words steer the model

The nature of a transformer

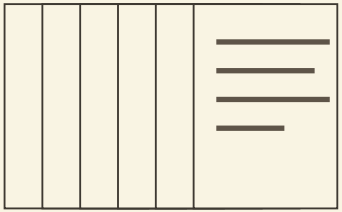

Section 3

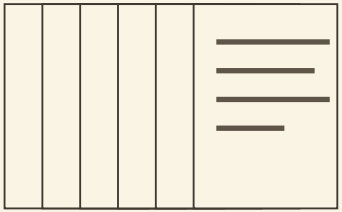

RAG

A prompt holds only part of the archive

All our documents

A prompt holds only part of the archive

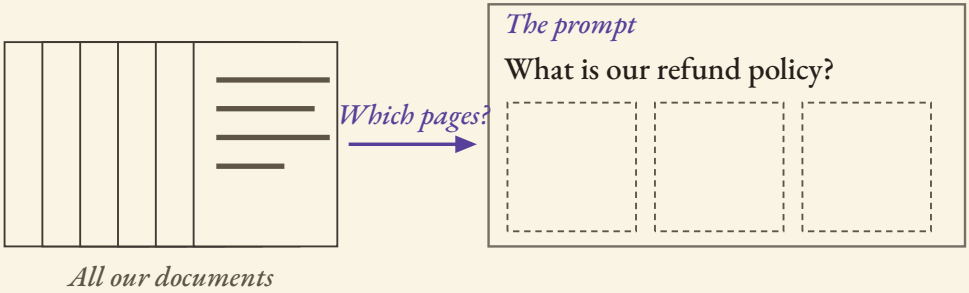

All our documents

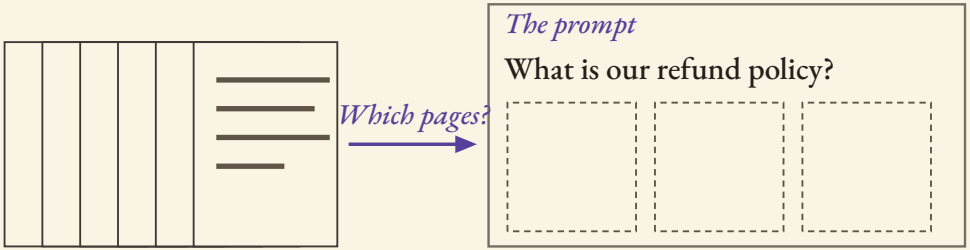

The prompt

What is our refund policy?

A prompt holds only part of the archive

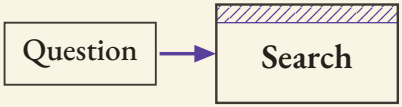

A prompt holds only part of the archive

In one study, the right pages added facts better than fine-tuning.

Search first, then answer from what was found

Before anyone asks, every page becomes a row, as in Game 4.

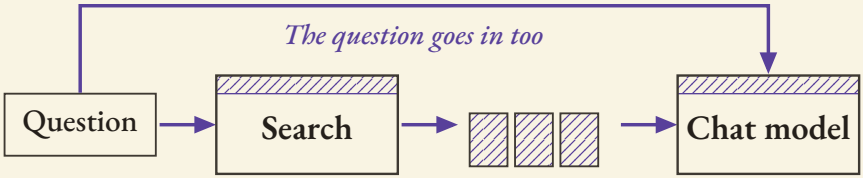

Search first, then answer from what was found

Before anyone asks, every page becomes a row, as in Game 4.

The question becomes a row too. The closest rows are the best pages.

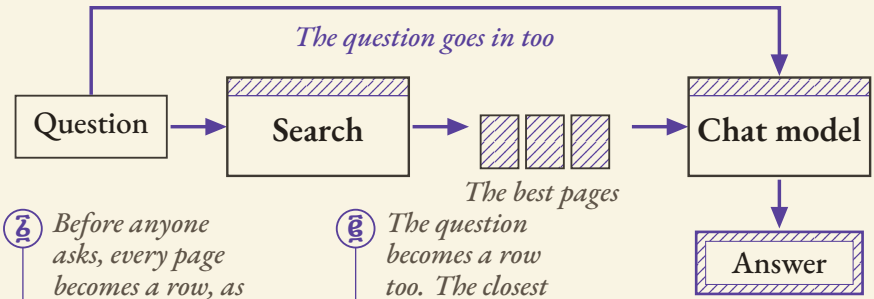

Search first, then answer from what was found

Before anyone asks, every page becomes a row, as in Game 4.

The question becomes a row too. The closest rows are the best pages.

Search first, then answer from what was found

The answer can point to its source

What is our refund policy?

You can return any item within a month for a full refund.

An invented answer

The answer can point to its source

What is our refund policy?

You can return any item within a month for a full refund.

Source: refund policy, returns

The facts come from your pages, so you can check them.

An invented answer

The answer can point to its source

What is our refund policy?

You can return any item within a month for a full refund.

Source: refund policy, returns

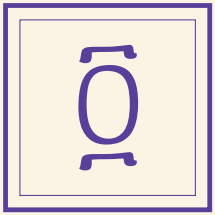

The facts come from your pages, so you can check them.

The search can miss the right page. Check the source.

An invented answer

RAG runs beside the line

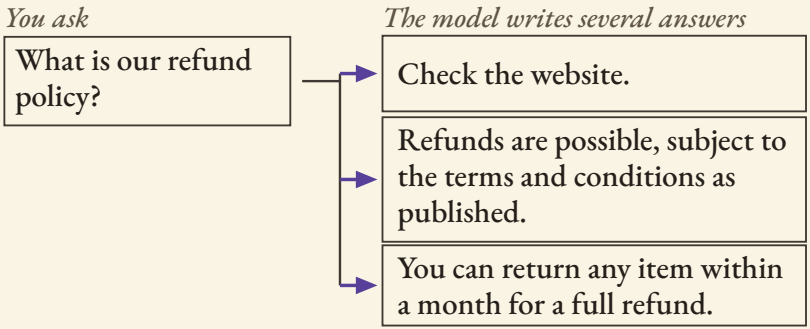

Section 4

Human feedback

People rank the answers

Invented answers

People rank the answers

You ask

What is our refund policy?

A person ranks them

The model writes several answers

Check the website.

Refunds are possible, subject to the terms and conditions as published.

You can return any item within a month for a full refund.

Second

Third

Best

Invented answers

People rank the answers

You ask

What is our refund policy?

A person ranks them

The model writes several answers

Check the website.

Refunds are possible, subject to the terms and conditions as published.

You can return any item within a month for a full refund.

Second

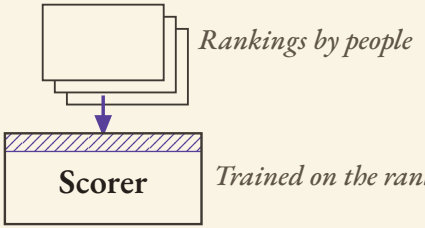

Third

Best

Invented answers

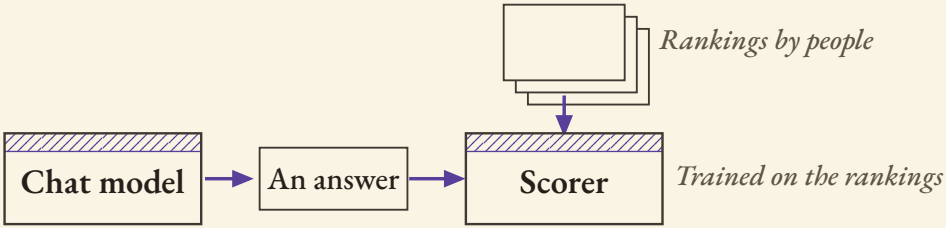

InstructGPT, 2022: 33 207 questions, each with 4 to 9 answers ranked.

A scorer learns the people's taste

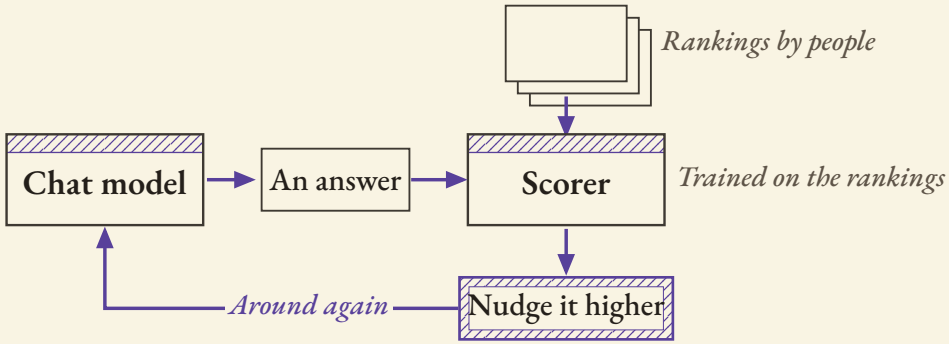

Invented example

A scorer learns the people's taste

Invented example

A scorer learns the people's taste

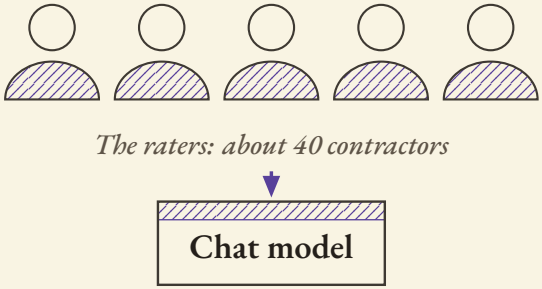

Invented example

The model learns the taste of its raters

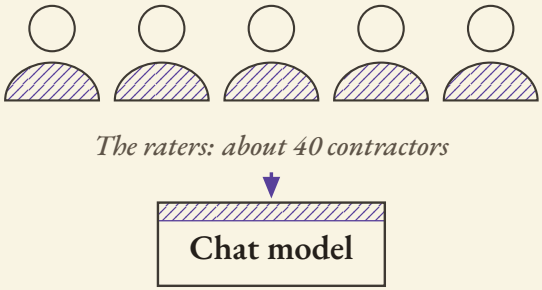

The raters: about 40 contractors

The model learns the taste of its raters

The model learns the taste of its raters

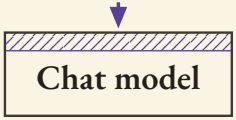

In the study, the raters preferred the answers of a model 100 times smaller.

The model learns the taste of its raters

The raters: about 40 contractors

In the study, the raters preferred the answers of a model 100 times smaller.

Approval can reward flattery: people sometimes prefer a convincing, agreeable answer to a correct one.

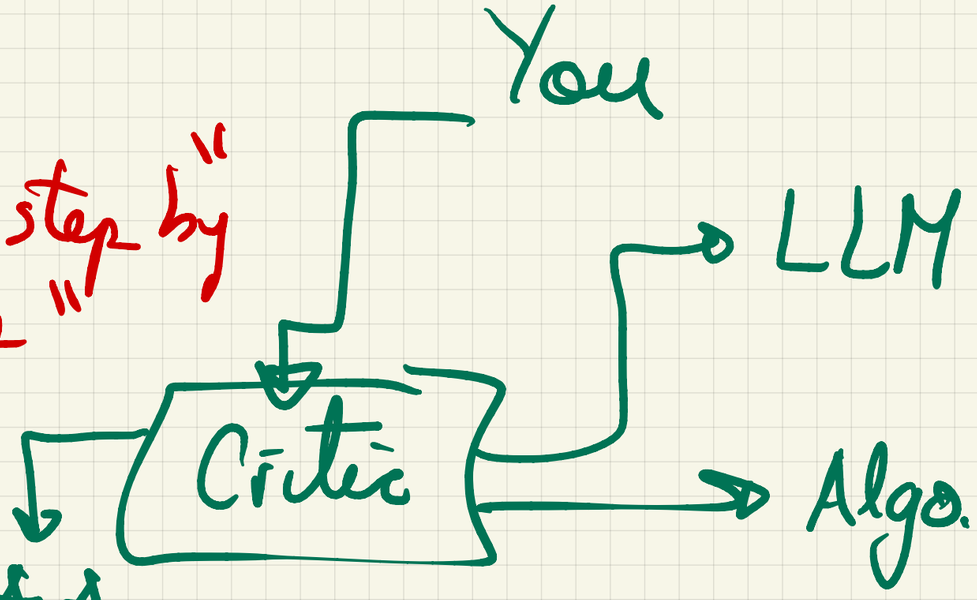

Three rungs up: answers people prefer

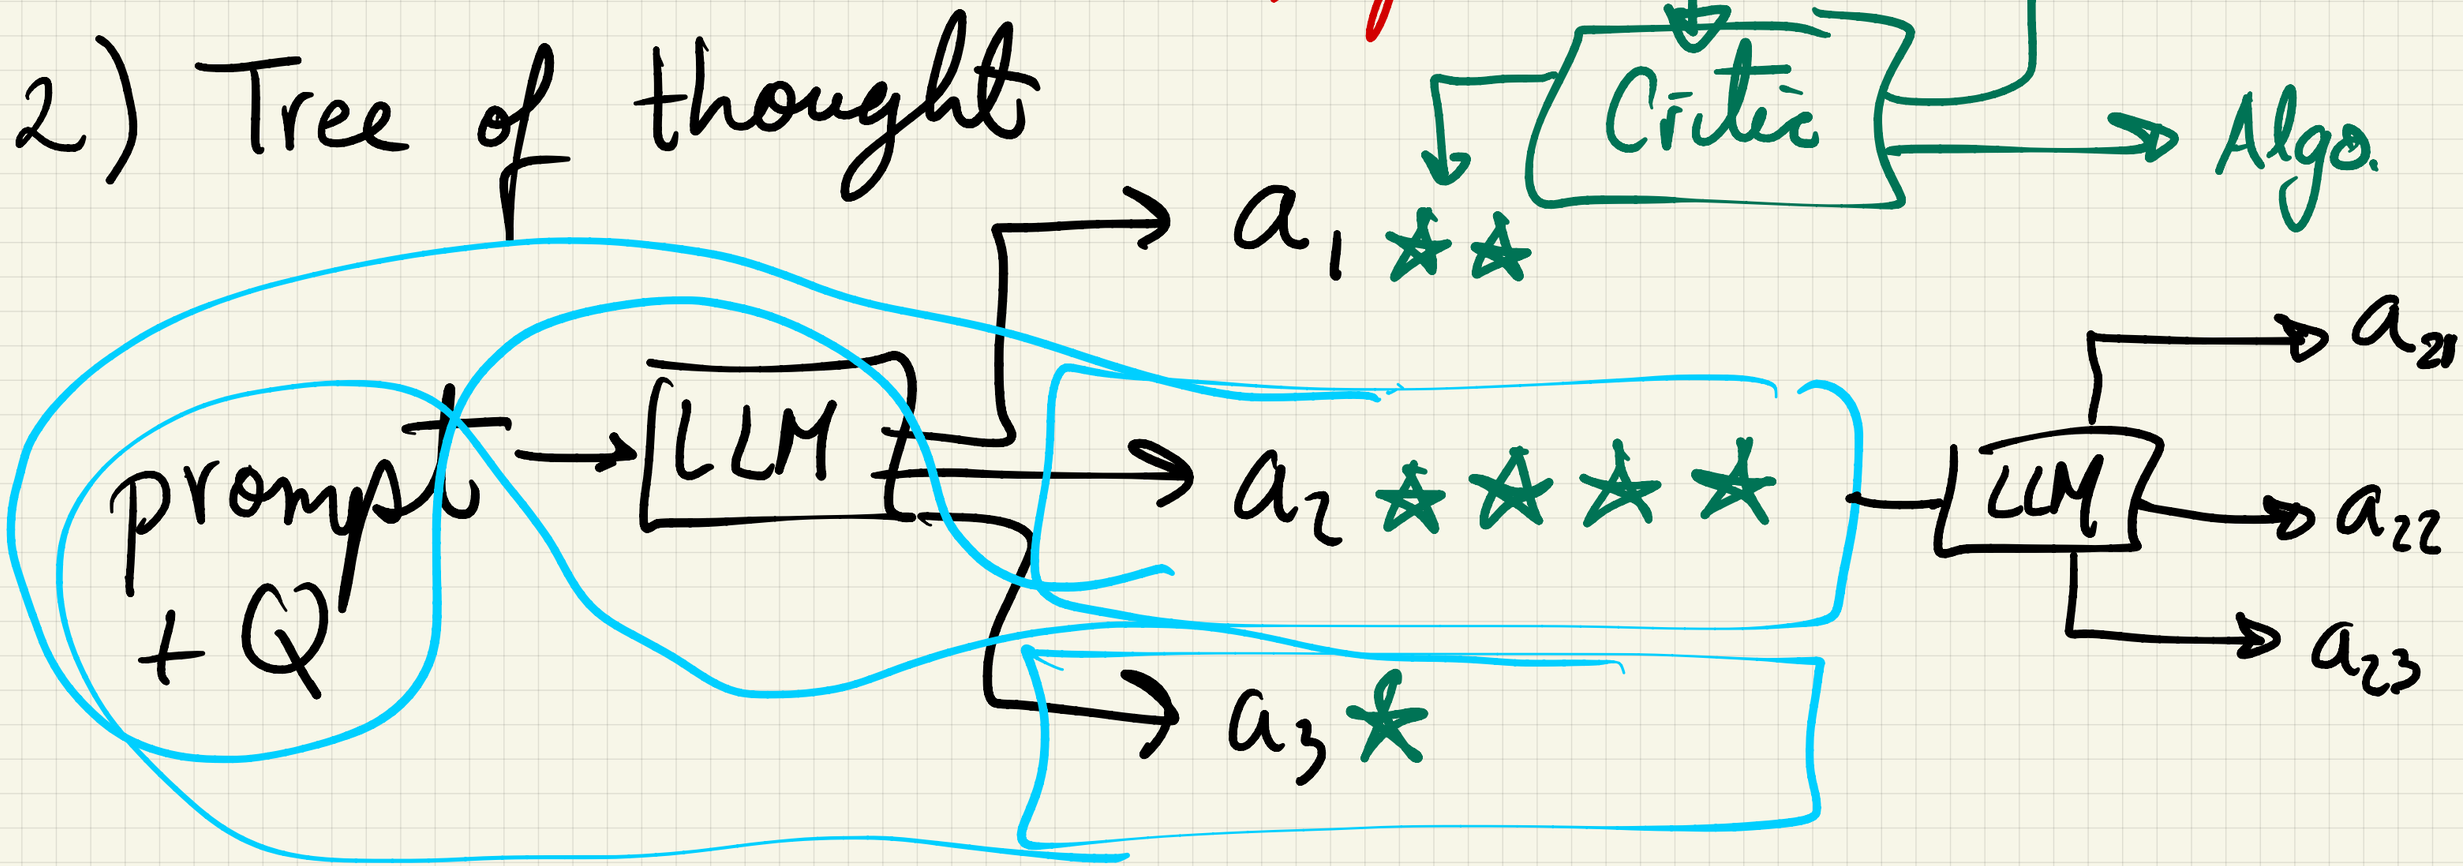

Coding exercises

1) Chain of thought

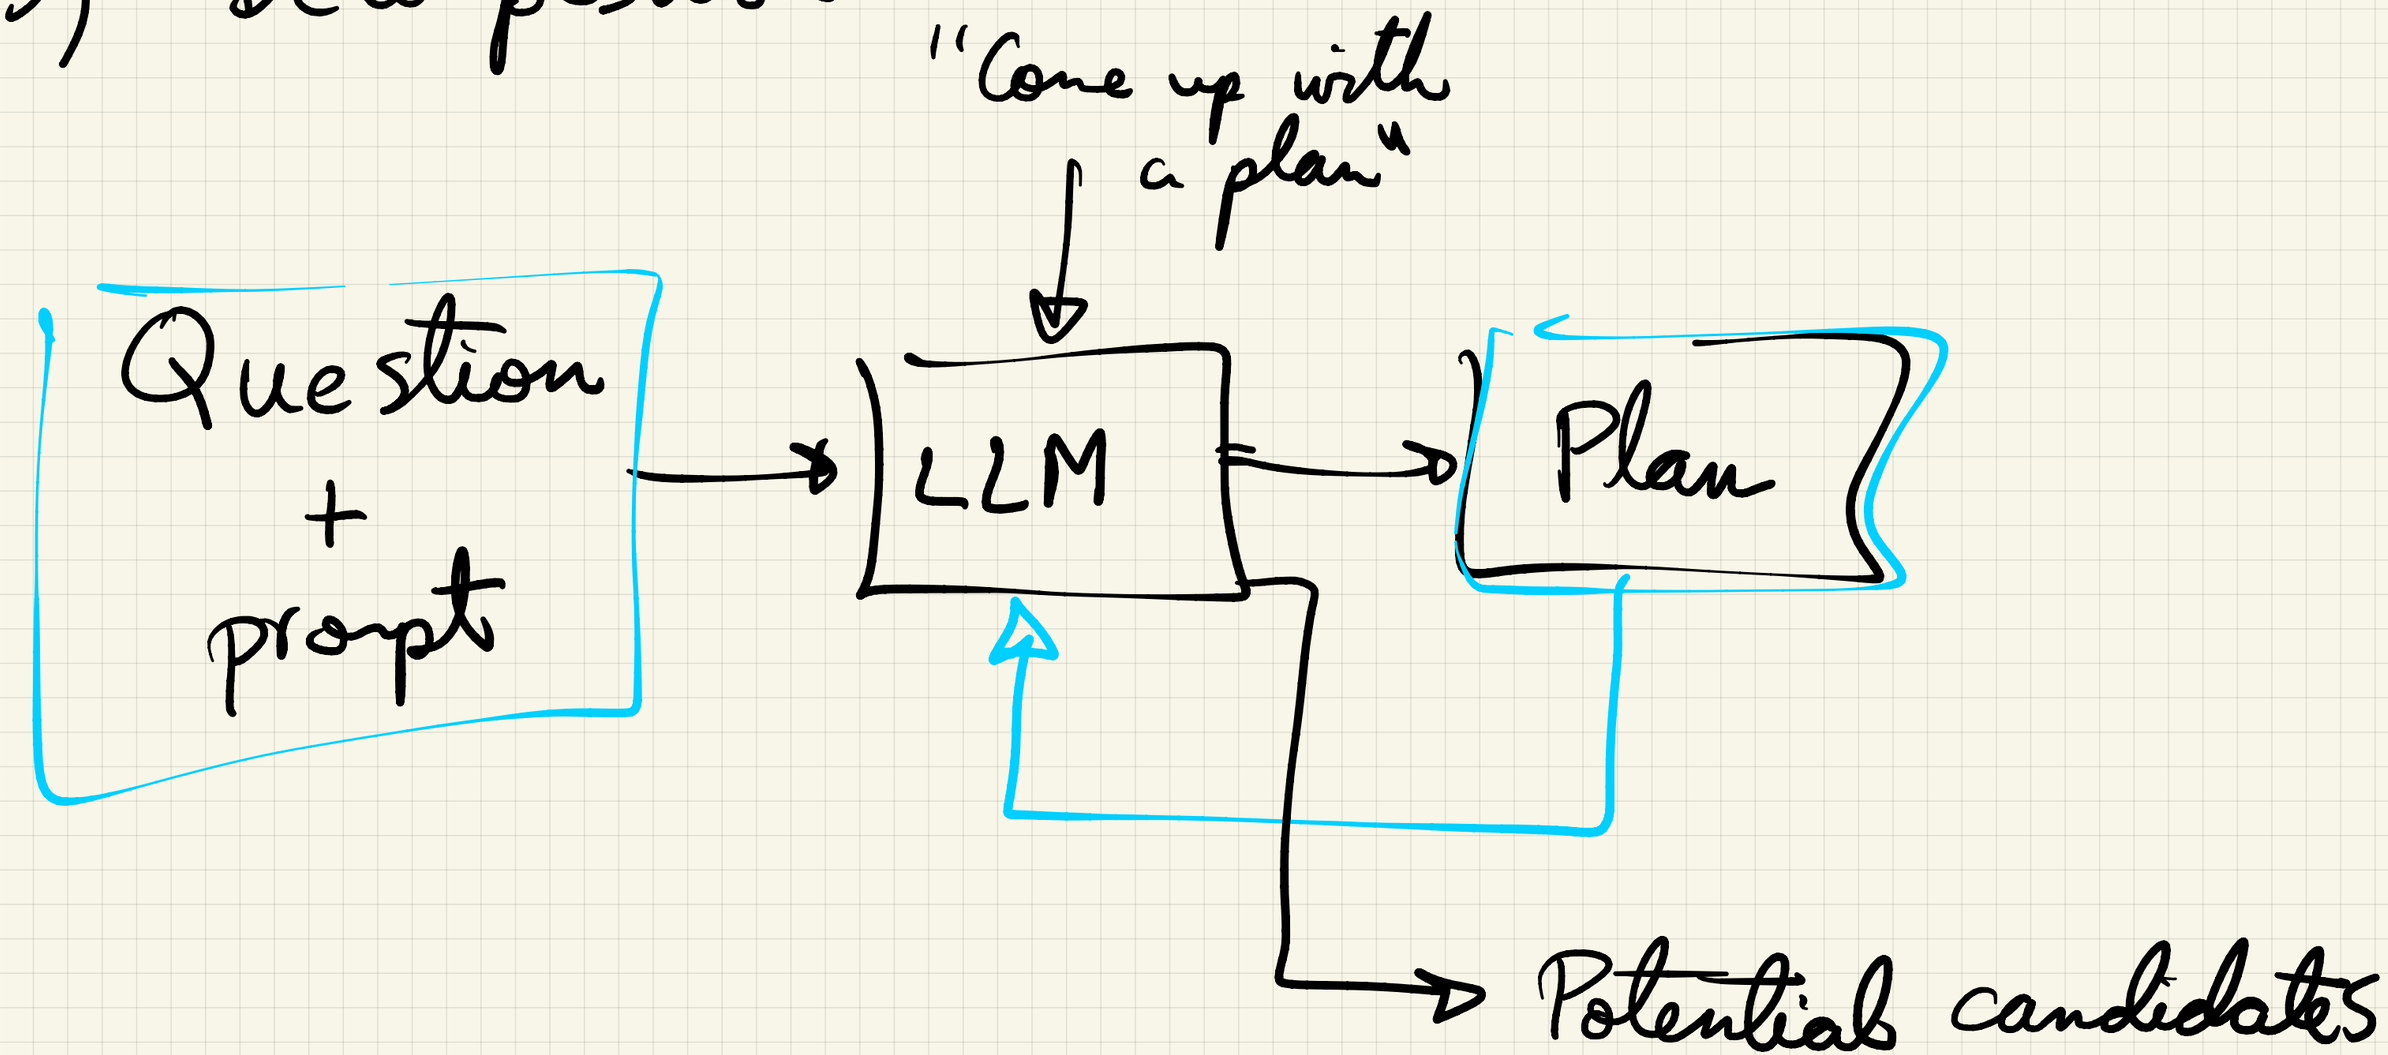

prompt → "Let's think step by step"

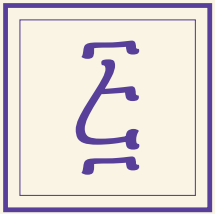

2) Tree of thought

3) Decomposition

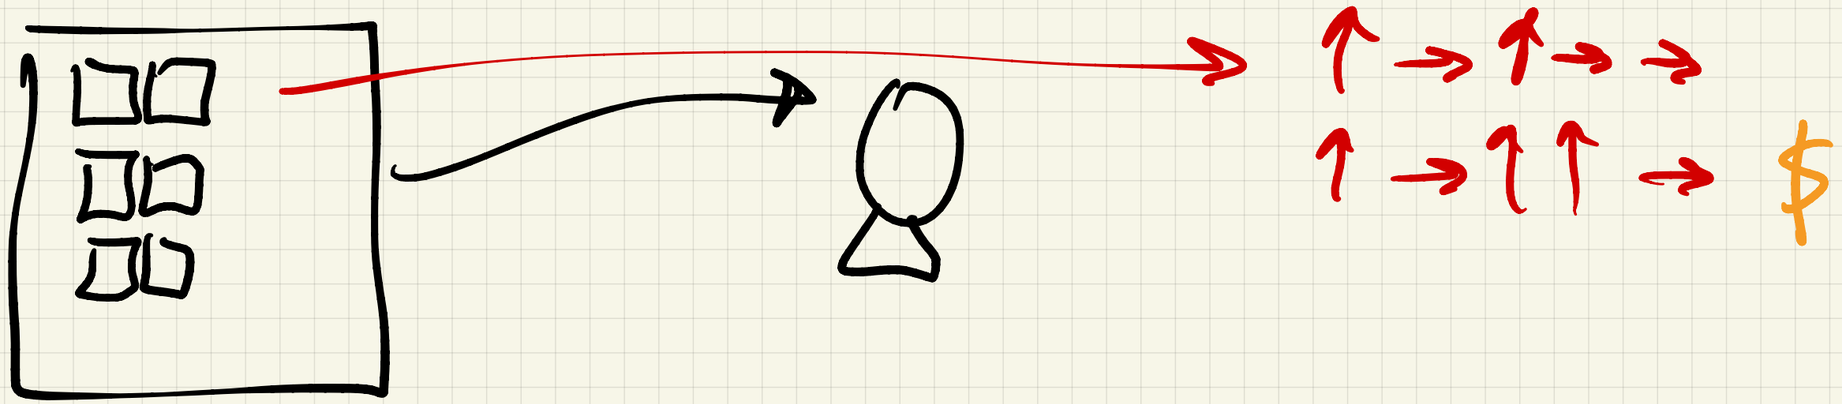

Section 5

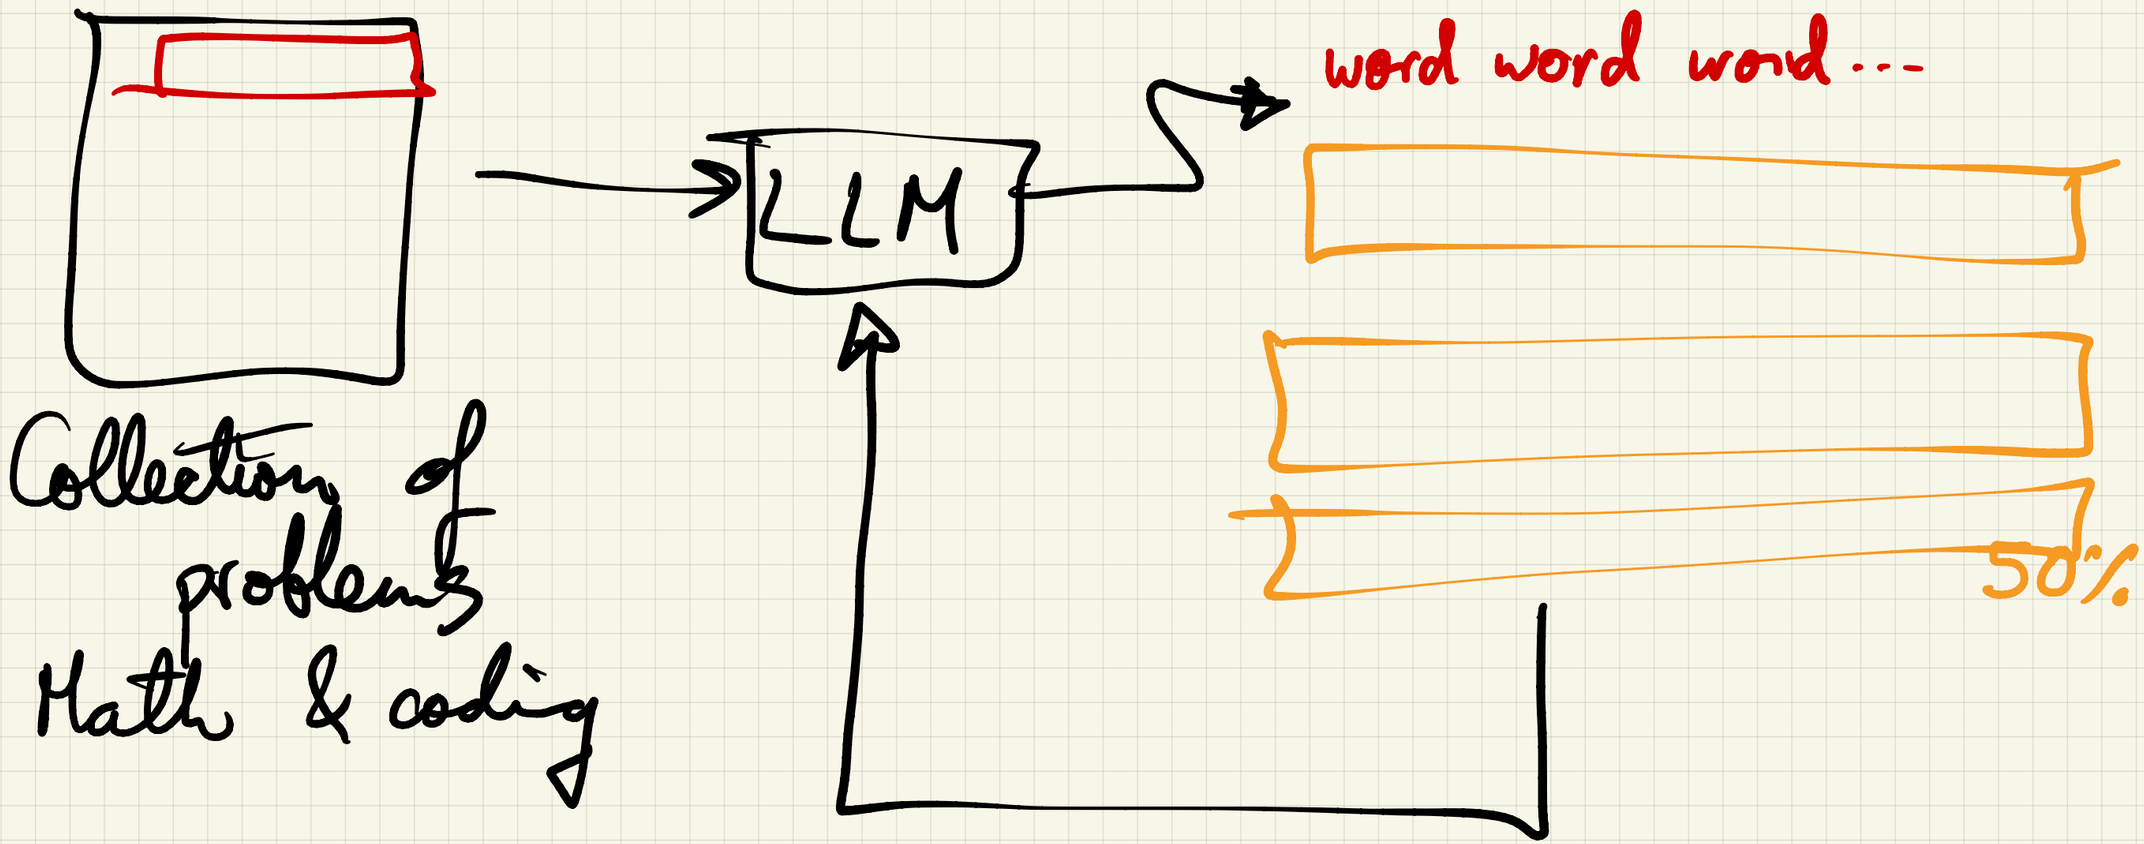

Verifiable rewards

Human learning

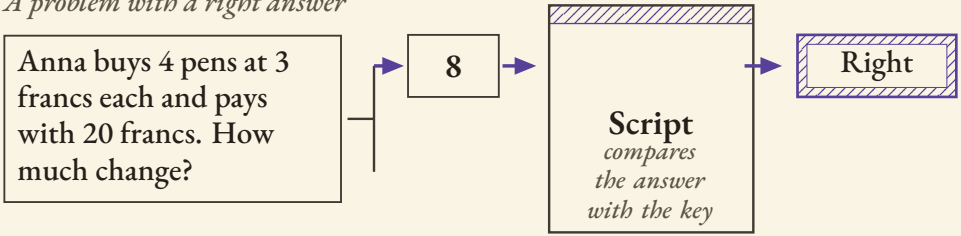

Instances of the game

Thinking LLMs

A script can check the answer

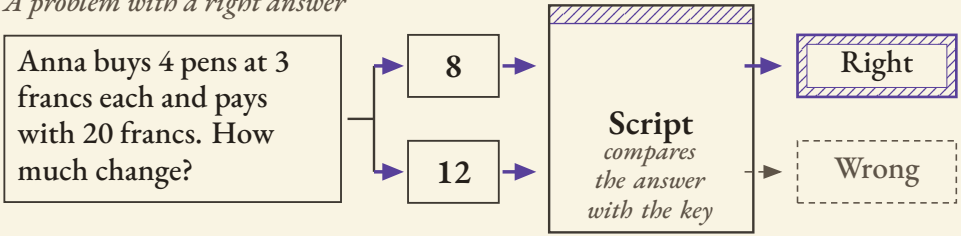

A problem with a right answer

Invented example

A script can check the answer

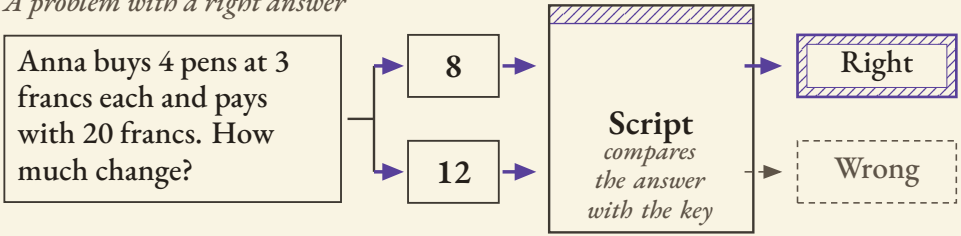

A problem with a right answer

Invented example

A script can check the answer

A problem with a right answer

For code, the script runs the tests. A program that passes them is right.

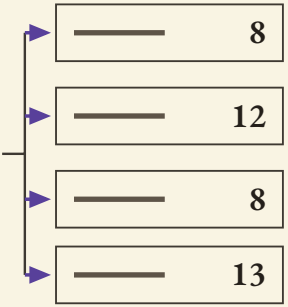

Invented example

The right answers become more likely

One problem

Anna buys 4 pens at 3 francs each and pays with 20 francs. How much change?

Four tries

Invented example

The right answers become more likely

One problem

Anna buys 4 pens at 3 francs each and pays with 20 francs. How much change?

Four tries

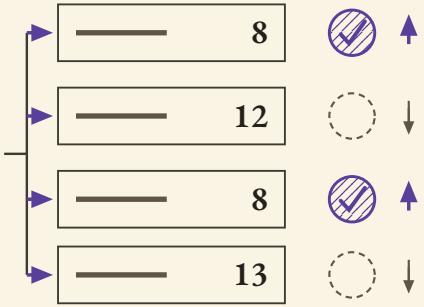

Invented example

The right answers become more likely

One problem

Anna buys 4 pens at 3 francs each and pays with 20 francs. How much change?

Four tries

Right ones up, wrong ones down, *around again*

Invented example

The model learns to think before it answers

Anna buys 4 pens at 3 francs each and pays with 20 francs. How much change?

Thinking

4 pens at 3 francs: 4 times 3 is 12.
She pays 20: 20 minus 12 is 8.

Answer: 8

Invented example

The model learns to think before it answers

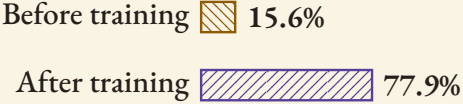

Anna buys 4 pens at 3 francs each and pays with 20 francs. How much change?

Thinking

4 pens at 3 francs: 4 times 3 is 12.
She pays 20: 20 minus 12 is 8.

Answer: 8

Right answers on a maths competition

Invented example

The model learns to think before it answers

Anna buys 4 pens at 3 francs each and pays with 20 francs. How much change?

Thinking

4 pens at 3 francs: 4 times 3 is 12.
She pays 20: 20 minus 12 is 8.

Answer: 8

Right answers on a maths competition

Before training 15.6%

After training 77.9%

Nobody wrote the steps. They appeared because they led to more right answers.

Invented example

Four rungs up: it reasons before it answers

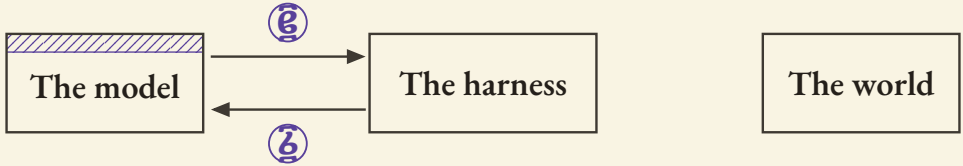

6

Section 6

A harness

The harness turns text into actions

The program around the model. It turns text into actions and feeds back what happened.

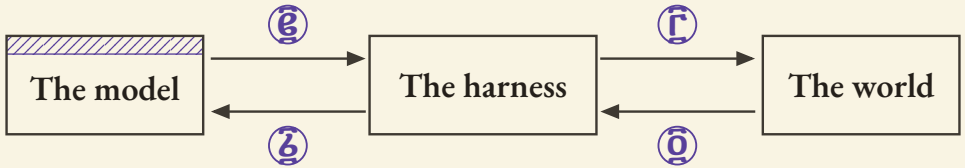

- Builds the prompt: the tools and the transcript
- Reads the reply and finds the tool call

Anthropic, tool use, 2026

The harness turns text into actions

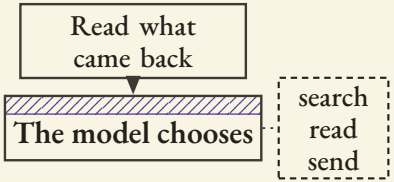

The program around the model. It turns text into actions and feeds back what happened.

- Builds the prompt: the tools and the transcript
- Reads the reply and finds the tool call
- Runs that tool on the world
- Appends the result, then calls the model again or stops

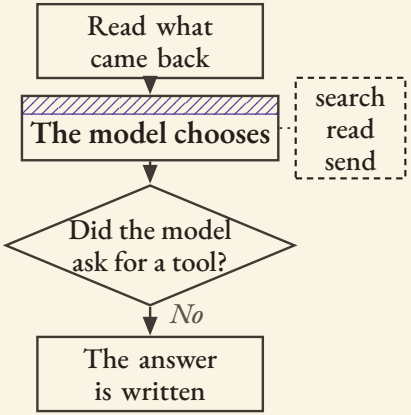

Anthropic, tool use, 2026

The loop: think, act, observe, again

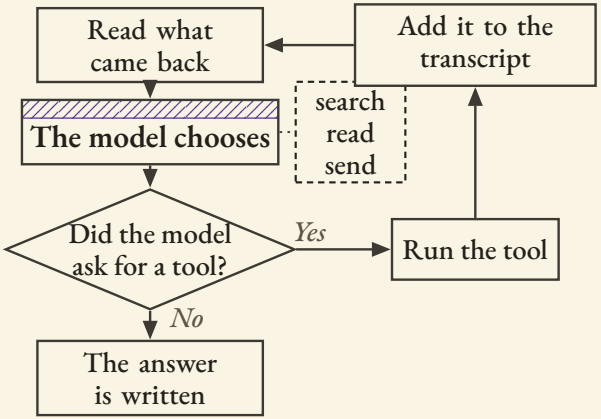

Yao and others, ReAct, ICLR 2023

The loop: think, act, observe, again

Yao and others, ReAct, ICLR 2023

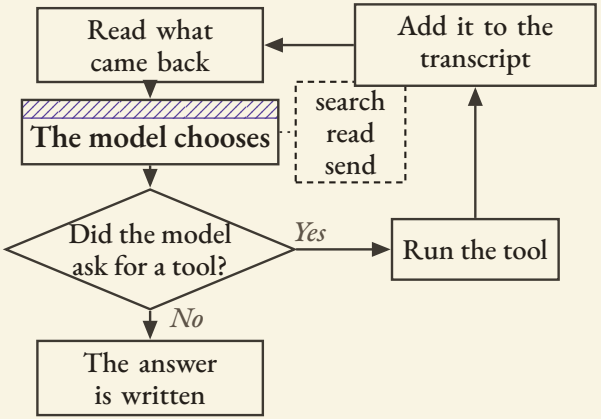

The loop: think, act, observe, again

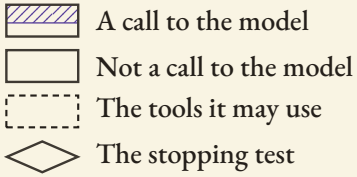

The stopping test is in the loop's own condition. It is not a step counter.

Yao and others, ReAct, ICLR 2023

The loop: think, act, observe, again

The stopping test is in the loop's own condition. It is not a step counter.

Yao and others, ReAct, ICLR 2023

The transcript the model is called with

The transcript

Request

Our refund policy, please.

This box and the prompt are the context window

Written once, by a person

You are the support agent of our shop. Tools: search, read, send. One tool call per turn.

Invented example

The transcript the model is called with

The transcript

Request

Our refund policy, please.

Action

search(“refund policy”)

This box and the prompt are the context window

Written once, by a person

You are the support agent of our shop. Tools: search, read, send. One tool call per turn.

What the model wrote this step

search(“refund policy”)

Invented example

The transcript the model is called with

The transcript

Request	Our refund policy, please.
Action	search(“refund policy”)
Result	Returns: any item within one month, full refund.
Action	reply(“You can return any item within a month.”)

This box and the prompt are the context window

Written once, by a person

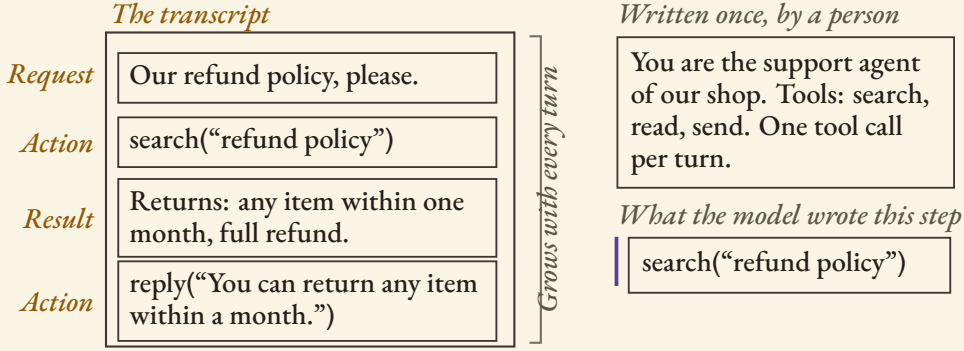

You are the support agent of our shop. Tools: search, read, send. One tool call per turn.

What the model wrote this step

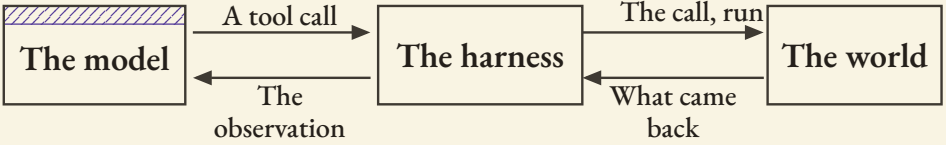

search(“refund policy”)

Invented example

Five rungs up: it acts with tools

7

Section 7

Planning strategies

These tasks are games

The task	A position	A move	You have won when
Chess	The board right now	A legal move	Checkmate
Fixing a bug	The repository, and a failing test	An edit, or a command	The tests pass
Booking a table	The page you are on	A click, or something typed	The booking is confirmed
Buying the right item	The search results	A search, or a click on a product	It matches what was asked

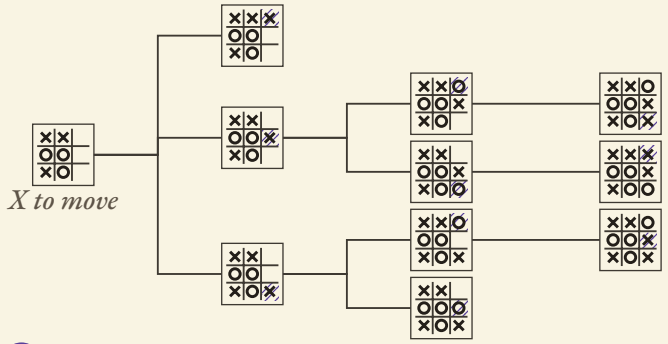

These tasks are games

The task	A position	A move	You have won when
Chess	The board right now	A legal move	Checkmate
Fixing a bug	The repository, and a failing test	An edit, or a command	The tests pass
Booking a table	The page you are on	A click, or something typed	The booking is confirmed
Buying the right item	The search results	A search, or a click on a product	It matches what was asked

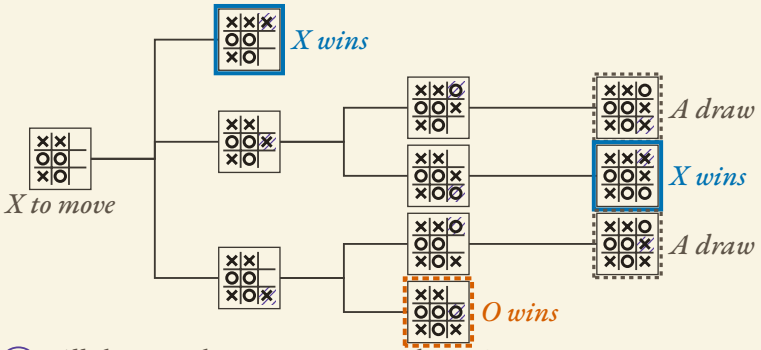

In all four, one move is rarely right or wrong on its own. It is right if where it leads is good.

The whole search tree, for once

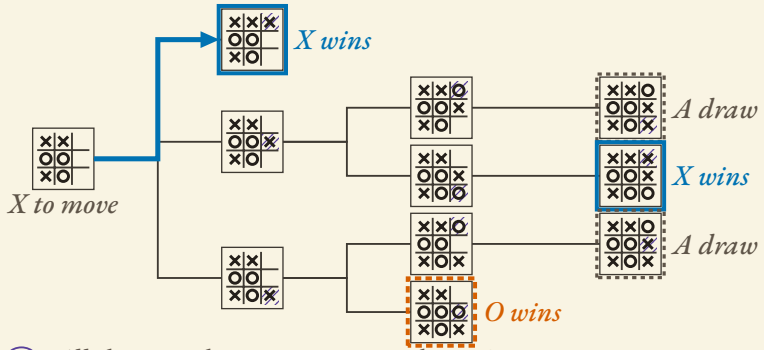

All the ways the game can go are here. One move wins at once, one draws, one loses.

The whole search tree, for once

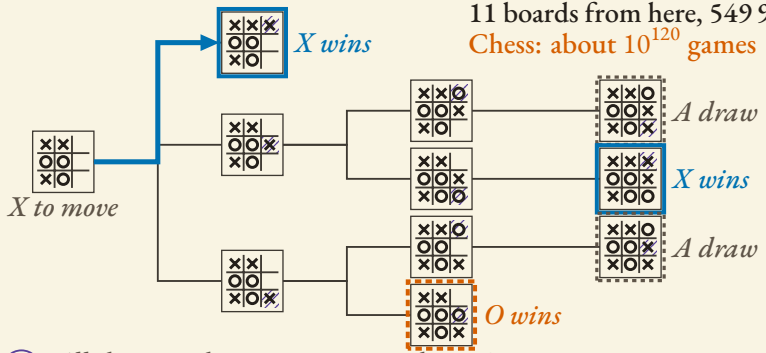

All the ways the game can go are here. One move wins at once, one draws, one loses.

The whole search tree, for once

All the ways the game can go are here. One move wins at once, one draws, one loses.

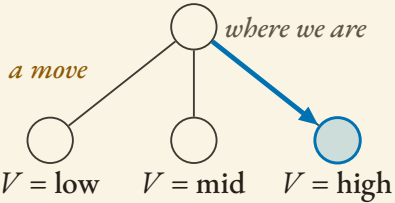

The whole search tree, for once

All the ways the game can go are here. One move wins at once, one draws, one loses.

Two ways to score a position

A critic: an opinion

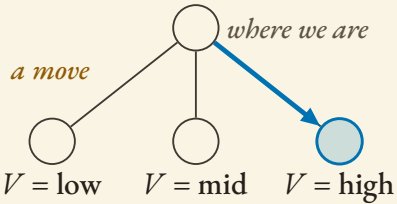

A critic is fast, and it can be confidently wrong.

X to move

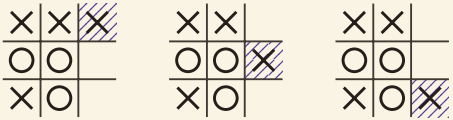

Two ways to score a position

A critic: an opinion

A critic is fast, and it can be confidently wrong.

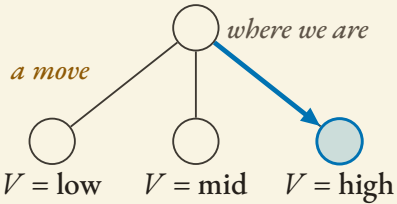

A rollout: play it out, at random

X to move

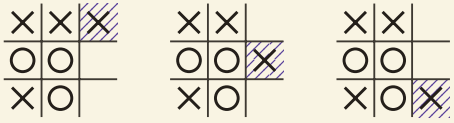

Two ways to score a position

A critic: an opinion

A critic is fast, and it can be confidently wrong.

A rollout: play it out, at random

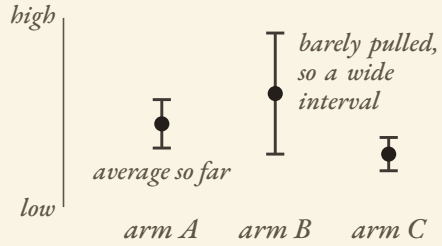

The average of 100 random playouts

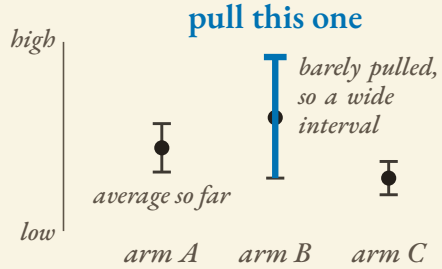

A real measurement, one noisy sample at a time.

X to move

Pick the arm with the highest upper bound

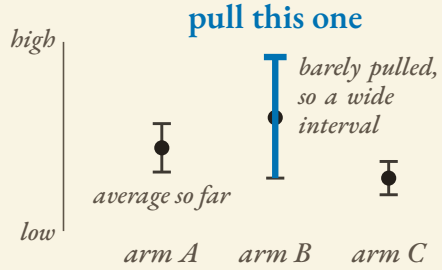

Pick the arm with the highest upper bound

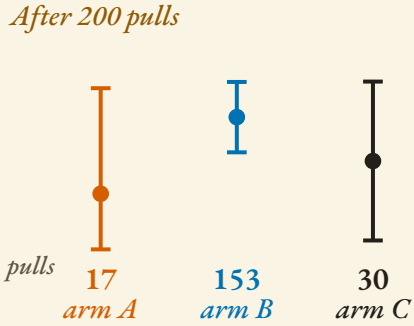

A barely pulled arm has a wide interval, so it is tried even when its average is poor.

Pick the arm with the highest upper bound

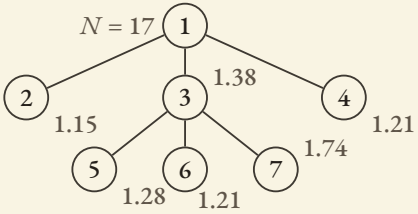

A barely pulled arm has a wide interval, so it is tried even when its average is poor.

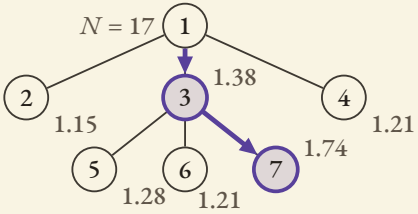

In the tree, this rule is UCT: how good it looked, plus how little we know.
